REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of records fails to teach or suggest the following:

A cellular system in a code division multiple access mode comprising (inter alias):

a base station control unit having means for notifying each base station of a plurality of base stations, in advance, of a unique information and a sequence information; and each of the base stations has means for judging whether or not each of the base stations itself is specified as the transmitting base station by creating in advance code word candidates configured to be transmitted by the mobile station based on the unique information and the sequence information and checking the code word received from a mobile station against the code word candidates, as indicated in independent claims 1, 2, 13 and 14.

A cellular system in a code division multiple access mode comprising (inter alias):

a base station control unit for assigning code words and base station identifiers that are unique information of the base stations there under and determining a predetermined base station number threshold, wherein each of the base stations is operable to check the code word transmitted from the mobile station having the radio link set up against a table created based on correspondence between the assigned

Art Unit: 2616

code words and the assigned base station identifiers and the base station number threshold and determine a transmitting base station, wherein the base station control unit has means for, in the case where the mobile station sets up links with the base stations equal to or exceeding the base station number threshold, duplicatively assigning a base station identifier to at least two of the base stations and notifying the base stations, in advance, of said duplicatively assigned base station identifier, the assigned code words and the base station number threshold; and each of said base stations has means for, in the case where the mobile station sets up links with the base stations equal to or exceeding the base station number threshold, judging whether or not each of the base stations itself is specified as the transmitting base station by creating in advance code word candidates configured to be transmitted by the mobile station based on the duplicatively assigned base station identifier and said base station number threshold and checking the code word received from the mobile station against the code word candidates, as indicated in independent claims 7 and 19.

A cellular system using a code division multiple access mode and comprising (inter alias):

a base station control unit having first means for notifying each base station of a maximum base station number that is a maximum number of the base stations which have the radio links set up with said mobile station; and a mobile station determining one transmitting base station or a plurality of transmitting base stations out of the base stations according to measuring results thereof, and transmitting to each base station a

code word indicating a combination of the base station identifiers of the transmitting base stations, wherein each of the base stations has means for judging whether or not each of the base stations is specified as the transmitting base station by determining judgment candidates that are the code words configured to be transmitted by the mobile station based on a predetermined order and the maximum base station number and checking the code word received from the mobile station against the judgment candidates, as indicated in independent claims 8, 9 and 12.

A base station specification method in a cellular system using a code division multiple access mode and including a mobile station, base stations having radio links set up with the mobile station and a base station control unit assigning base station identifiers to the base stations in predetermined order, the method comprising (inter alias):

notifying each base station of the maximum base station number that is the maximum number of the base stations which have the radio links set up with the mobile station, measuring reception quality of pilot signals transmitted by the base stations, determining one transmitting base station or a plurality of transmitting base stations out of the base stations according to measuring results thereof, and transmitting to each base station a code word indicating a combination of the base station identifiers of the transmitting base stations; and judging whether or not the base station is specified as the transmitting base station by determining judgment candidates that are the code words configured to be transmitted by the mobile station based on the order and the

maximum base station number and checking the code word received from the mobile station against the judgment candidates, as indicated in independent claims 20-22.

A base station specification method in a cellular system using a code division multiple access mode and including a mobile station, base stations having radio links set up with the mobile station and a base station control unit assigning base station identifiers to the base stations having the radio links set up, the method comprising:

 duplicatively assigning a base station identifier that is already assigned, transmitting to each base station of the base stations a code word indicating a combination of the base station identifiers of transmitting base stations based on measurement of signal strength; and judging whether or not each of the base stations is specified as the transmitting base station by checking the code word received from the mobile station against code words indicating combinations of the base station identifiers of the base stations, as indicated in independent claim 24.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
